GENERAL INFORMATION

**Brake Systems - Motorist Assurance Program
Standards For Automotive Repair**

All Makes & Models

INTRODUCTION TO MOTORIST ASSURANCE PROGRAM (MAP)

OVERVIEW OF MOTORIST ASSURANCE PROGRAM

The Motorist Assurance Program (MAP) is the consumer outreach effort of the Automotive Maintenance and Repair Association, Inc. (AMRA). Participation in the Motorist Assurance Program is drawn from retailers, suppliers, independent repair facilities, vehicle manufacturers and industry associations.

The Motorist Assurance Program was established as an industry-wide effort to address concerns raised by regulators, the media and consumers questioning our ethics and methods of doing business. The automotive repair industry had been bombarded by months of negative stories in the media and scrutiny from state and federal regulators who focused on how the need for repairs is determined. MAP was formed as an industry response to this issue.

Our mission is to strengthen the relationship between the consumer and the auto repair industry. We produce materials that give motorists the information and encouragement to take responsibility for their vehicles - through proper, manufacturer-recommended, maintenance. We encourage participating service and repair shops (including franchisees and dealers) to adopt a Pledge to their Customers and the Motorist Assurance Program developed Standards of Service. All participating service providers have agreed to subscribe to this Pledge and to adhere to the promulgated Standards of Service which demonstrates to their customers that they are serious about customer satisfaction.

These Standards of Service require that an inspection of the vehicle's (problem) system be made according to industry guidelines. After learning that neither the car manufacturers nor any other source had complete guidelines, leading industry organizations, along with other industry participants banded together to address this challenging task. During the past two and a half years, they successfully developed industry inspection guidelines for the following systems: Exhaust, Brakes, ABS, Steering and Suspension, Engine Maintenance and Performance, HVAC, and Electrical systems. Guidelines for Drive Train and Transmission are currently being promulgated. Revisions to the inspection guidelines for Exhaust, Brakes/ABS and Steering and Suspension Systems, which were issued two years ago, are now being published for implementation beginning spring 1997. Participating shops utilize these Uniform Inspection Guidelines as part of the inspection process and for communicating their findings to their customers.

The Motorist Assurance Program continues to work cooperatively and proactively with government agencies and consumer groups toward solutions that both benefit the customer and are mutually acceptable to both regulators and industry. We maintain the belief that industry must retain control over how we conduct our business, and we must be viewed as part of the solution and not part of the problem. Meetings with state and other government officials concerned with auto repair and/or consumer protection are conducted. Feedback from these representatives are brought back to members, and the program adjusted as needed.

To assure auto repair customers recourse if they were not satisfied with a repair transaction, the Motorist Assurance Program offers arbitration through MAP/BBB-CARE in cooperation with the Council of Better Business Bureaus and individual participating Bureaus. MAP "piloted" in Indianapolis and Pittsburgh during spring, 1996 - and publicized "roll-outs" in New Jersey, Detroit (MI), Chicago (IL) and Richmond (VA) were conducted. To put some "teeth" in the program, and accreditation requirement for shops was initiated. The requirements are stringent and a self-policing method has been incorporated which includes the "mystery shopping" of outlets. In addition, a committee of service providers had been working diligently developing standards for newspaper, television and Internet advertising.

We welcome you to join us as we continue our outreach ... with your support, both the automotive repair industry and your customers will reap the benefits. Please visit MAP at our Internet site: www.hunter.com/map.htm or contact us at:

808 17th Street, NW Suite 200
Washington, D. C. 20006
Ph. (202) 466-7050 Fax (202) 223-9569

The Motorist Assurance Program was formed in 1992 by forty (40) companies who were concerned about the image of automotive service establishments. Today, MAP is an industry-wide association dedicated to strengthening consumer satisfaction with the automotive repair industry. MAP's participants represent the majority of the nation's multi-bay retail automotive outlets, their parts and equipment suppliers, independent repair shops, industry associations, car companies, manufacturers representatives, and the trade press. MAP is developing standards of service, uniform inspection procedures and other programs to assure consumers of the industry's professionalism and the commitment to excellence shared by MAP's sponsoring companies.

MAP's achievements to date include production and distribution (over 280,000) of the consumer brochure "How to Find Your Way Under the Hood and Around Your Car", development of a Pledge of Satisfaction to Consumers and Standards of Service and establishment of relationships with regulatory agencies.

As auto repair becomes an issue for federal and state regulators, MAP is working to educate government leaders on the dynamics of automotive service and the self-monitoring efforts MAP has undertaken on the industry's behalf. MAP's sponsoring companies

are becoming well-known to government representatives as exemplary businesses working to improve the industry. Media sources also look to MAP to provide information and advice to consumers and on working with automotive technicians and repair establishments.

In the next few months, MAP plans to assist member repair facilities in implementing the MAP Pledge to Customers, establishing an alternate dispute resolution system to help resolve customer complaints within the industry, and developing a shop accreditation program to encourage policies in concert with the MAP Standards of Service and Inspection Guidelines.

MAP has united the aftermarket behind its consumer-oriented goals and has established itself both within and outside of the industry. We welcome you to join us as MAP continues its outreach. With your support, both the automotive repair industry and your customers will reap the benefits. Please contact MAP at:

MAP UNIFORM INSPECTION GENERAL GUIDELINES

OVERVIEW OF SERVICE REQUIREMENTS & SUGGESTIONS

It is MAP policy that all exhaust, brake, ABS, steering and suspension, wheel alignment, tires and wheels, driveline, engine performance and maintenance and heating, ventilation and air conditioning services be offered and performed under the guidelines and procedures specified in these sections.

Before any service is performed on a vehicle, an inspection of the appropriate system must be performed. The results of this inspection must be explained to the customer and documented on an inspection form. The condition of the vehicle and its components will indicate what services/part replacements may be required or suggested. In addition, suggestions may be made to satisfy the needs expressed by the customer.

This section lists the various parts and conditions that indicate required or suggested service or part replacement. Although this list is extensive, it is not inclusive. In addition to this list, a technician may make a suggestion. This suggestion must be based on substantial and informed experience or the vehicle manufacturer's recommended service interval.

Some conditions indicate that service or part replacement is required because the part in question is no longer providing the function for which it is intended, does not meet a vehicle manufacturer's design specification or is missing.

- * Example: An exhaust pipe has corroded severely and has a hole in it through which exhaust gases are leaking. Replacement of the exhaust pipe in this case is required due to functional failure.

Reasons to Require Repair or Replacement		Reasons to Suggest Repair or Replacement	
A - Part no longer performs intended purpose		1 - Part is close to the end of its useful life (just above discard specifications, or weak; failure likely to occur soon, etc.)	

Anti-lock brake systems are commonly referred to as "ABS" and will be referred to as "ABS" throughout these guidelines. Some ABS components also function as part of a traction control system (TCS). Inspection, diagnostic, and service procedures vary. Refer to appropriate service manuals for vehicle's specific requirements.

Condition	Code	Procedure
Anchor pin bent	A	Require repair or replacement.
Anchor pin broken	A	Require replacement.

BRAKE FLUID

DOT 3 and DOT 4 brake fluids are clear or light amber in color. DOT 5 brake fluid is violet in color. Correct fluid required for the brake system is stamped on the master cylinder cover.

It is suggested that the system should be flushed and refilled with correct brake fluid when performing hydraulic brake service.

BRAKE FLUID

AA			
Condition	3	Code	3 Procedure
AA			
Beyond service interval	3	C, 3	3 Suggest replacement.
AA

You are not required to replace or rebuild calipers in axle sets. However, when replacing or rebuilding a caliper due to the conditions that follow, you may suggest servicing, rebuilding, or replacement of the other caliper (on the same axle) for improved performance and preventive maintenance (for example, the part is close to the end of its useful life, replacing the caliper may extend pad life, or contribute to more balanced braking).

Monday, August 23, 1999 11:21PM

Condition	Code	Procedure
Bleeder port damaged (if non-repairable)	A	Require replacement of caliper.
Bleeder screw plugged	A	Require repair or replacement of bleeder screw. See note (1) below
Bleeder screw broken off in caliper (if non-repairable)	A	Require replacement of caliper. See note (1) below.
Bleeder screw seized	A	Require replacement of caliper. See note (2) below.
Casting damaged - heavy corrosion affecting structural integrity	A	Require replacement of caliper.
Casting damaged - worn by rotor or wheel, affecting structural integrity	A	Require replacement of caliper.
Dust boot around caliper is torn	B, 2	Suggest rebuilding or replacement of caliper.
Leaking	A	Require rebuilding or replacement of caliper.
Mounting pin threads damaged	A	Require repair or replacement of component with damaged threads.
Mounting pin threads stripped (threads missing)	A	Require repair or replacement of component with stripped threads.
Mounting pin threads stripped in caliper bracket (threads missing)	A	Require repair or replacement of caliper bracket.
Mounting pin threads stripped in steering knuckle (threads missing)	A	Require repair or replacement of steering knuckle.

**DRUMS**

Determine the need to recondition based upon individual drum conditions that follow. Friction material replacement does not require drum reconditioning unless other justifications exist. DO NOT recondition new drums unless they are being pressed or bolted onto an existing hub. It is not necessary to replace drums in axle sets. However, when replacing or reconditioning a drum due to the conditions that follow, you may suggest reconditioning of the other drum on the same axle to eliminate uneven braking behavior. Determine the need to replace based upon the individual drum conditions that follow. Always wash drums after servicing or before installing.

NOTE: (1) Follow appropriate procedure for determined cause.

**MASTER CYLINDERS - BRAKE**

**MASTER CYLINDERS - BRAKE**

Condition	Code	Procedure
Brake fluid leaking from rear of master cylinder bore	A	Further inspection required. See note (1) below.
Brake pedal drops intermittently	A	Further inspection required. See note (2) below.
Fluid level low		Further inspection required. See caution below.

CAUTION: DO NOT TOP OFF. Look for disc pad wear or fluid leak.

Refer to OEM procedures for adjusting low fluid level.

Internal valve failure	A	Require repair or replacement. See note (3) below.
Master cylinder has residue in reservoir	B, 2	Further inspection required. See note (4) below.
Master cylinder leaking brake fluid internally	A	Require repair or replacement. See note (5) below.
Piston does not return	A	Require repair or replacement.
Ports plugged	A	Require repair or replacement.
Rubber master cylinder cover gasket distorted and gummy	A	Require replacement of the gasket. See note (6) below.

- NOTE: (1) Check for possible vacuum leak at booster input seal and/or push rod misalignment as possible causes. If neither is the cause, require repair or replacement of master cylinder.
- (2) This condition may be normal on some vehicles equipped with anti-lock brakes. If all other possible causes have been eliminated, require repair or replacement of master cylinder.
- (3) Require repair or replacement of valve if possible. If not possible, require replacement of the master cylinder.
- (4) DO NOT replace master cylinder unless it exhibits conditions listed for replacement. You may suggest fluid change according to OEM service intervals.

(5) Use hose clamp test to determine this condition. Use an approved brake hose clamp to avoid damage to the hose.

(6) This condition may indicate contaminated brake fluid. See Brake Fluid section of the Uniform Inspection Guidelines.

### RELAYS - BRAKE

RELAYS - BRAKE				
~~~~~				
Condition	³	Code	³	Procedure
~~~~~				
Housing cracked	³	B, 2	³	Suggest replacement. See note (1) below.
~~~~~				
Intermittent	³	A	³	Require replacement.
~~~~~				
Missing	³	A	³	Require replacement.
~~~~~				
Output signal incorrect	³	A	³	Require repair or replacement.
~~~~~				

NOTE: (1) If moisture enters the relay, it can reduce life expectancy or impair function.

~~~~~

ROTORS

Determine the need to recondition based upon individual rotor conditions that follow. Friction material replacement does not require rotor reconditioning unless other justifications exist. DO NOT recondition new rotors unless they are being pressed or bolted onto an existing hub. It is not necessary to replace rotors in axle sets. However, when replacing or reconditioning a rotor due to the conditions that follow, you may suggest reconditioning of the other rotor on the same axle to eliminate uneven braking behavior.

Determine the need to replace based upon the individual rotor conditions that follow. Reconditioning is defined as machining and block sanding, or block sanding only. Block sanding is defined as using 120-150 grit sandpaper with moderate to heavy force for 60 seconds per side. Always wash rotors after servicing or before installing.

|--|---|---|---------------------------------------|
| Corrosion affecting structural integrity | | | |
| 3 | A | 3 | Require replacement. |
| 3 | | 3 | See (1) note below. |
| Cracked | | | |
| 3 | A | 3 | Require replacement. |
| Hard spots | | | |
| 3 | A | 3 | Suggest reconditioning or replacement |
| 3 | | 3 | of rotor according to OEM specs. |
| Lateral runout (wobble) exceeds OEM specs | | | |
| 3 | A | 3 | Require re-indexing, reconditioning, |
| 3 | | 3 | or replacement according to specs. |
| Measured thickness is less than OEM discard specifications | | | |
| 3 | A | 3 | Require replacement. |
| 3 | | 3 | |
| Rotor thickness will be less than OEM "machine to" specifications after required reconditioning | | | |
| 3 | A | 3 | Require replacement. |
| 3 | | 3 | See note (2) below. |
| 3 | | 3 | |
| 3 | | 3 | |
| Surface is rust-pitted | | | |
| 3 | A | 3 | Require reconditioning or replacement |
| 3 | | 3 | of rotor according to OEM specs. |
| Surface is scored | | | |
| 3 | A | 3 | Require reconditioning or replacement |
| 3 | | 3 | of rotor according to OEM specs. |
| 3 | | 3 | See note (3) below. |
| Thickness variation (parallelism) exceeds OEM specifications | | | |
| 3 | A | 3 | Require reconditioning or replacement |
| 3 | | 3 | of rotor according to OEM specs. |
| NOTE: (1) Examples of severe corrosion are: composite plate separated from friction surfaces and cooling fins cracked or missing. | | | |
| (2) If OEM does not supply "machine to" specifications, you may machine to discard specifications. | | | |
| (3) Scoring is defined as grooves or ridges in the friction contact surface. Some vehicle manufacturers require machining when scoring exceeds their allowable specifications. | | | |

SELF-ADJUSTING SYSTEMS

SELF-ADJUSTING SYSTEMS

| | | | |
|-------------|------|---|----------------------------------|
| Condition | | | |
| 3 | Code | 3 | Procedure |
| Inoperative | | | |
| 3 | A | 3 | Require repair or replacement of |

| | | | | |
|---------------------------------|---|---|---|--------------------------------|
| Missing | 3 | A | 3 | Require replacement. |
| Star wheel does not turn freely | | | | |
| | 3 | A | 3 | Require repair or replacement. |

STEEL BRAKE LINES

CAUTION: When replacing steel brake lines, replacement product must meet or exceed OEM design specifications.

STEEL BRAKE LINES

| | | | | |
|--|---|------|---|------------------------------------|
| Condition | 3 | Code | 3 | Procedure |
| Fitting incorrect (e.g. compression fitting) | 3 | A | 3 | Require replacement. |
| Flare type incorrect | 3 | A | 3 | Require replacement. |
| Leaking | 3 | A | 3 | Require tightening or replacement. |
| Line material incorrect (copper, etc.) | 3 | A | 3 | Require replacement. |
| Mounting hardware damaged | 3 | A | 3 | Require repair or replacement. |
| Mounting hardware missing | 3 | A | 3 | Require replacement. |
| Restricted | 3 | A | 3 | Require replacement. |
| Routed incorrectly | 3 | A | 3 | Require routing correction. |
| Rust-pitted | 3 | A | 3 | Suggest replacement. |

TIRES & WHEELS

Incorrect tire size, diameter, or pressure may affect the operation of ABS, traction control, and braking systems.

Consult the vehicle owner's manual or vehicle placard for correct size, speed ratings, and inflation pressure of the original tires.

TOOTHED RINGS (TONE WHEEL)

If the toothed ring requires replacement and cannot be replaced as a separate component, replace the assembly of which the ring is a part.

For conditions noted below, also check conditions of wheel stud holes.

CAUTION: Proper lug nut torque is essential. Follow manufacturer's torque specifications and tightening sequence.
DO NOT lubricate threads unless specified by the vehicle manufacturer.

WHEEL ATTACHING HARDWARE

| Condition | | | Code | Procedure |
|------------------------------------|--|--|------|--|
| Bent | | | | |
| | | | A | Require replacement. |
| Broken | | | | |
| | | | A | Require replacement. See note (1) below. |
| Loose | | | | |
| | | | A | Require repair or replacement of |
| | | | | affected component. |
| Lug nut installed backward | | | | |
| | | | A | Require repair. |
| Lug nut mating type incorrect | | | | |
| | | | A | Require replacement of nut. |
| Lug nut mating surface dished | | | | |
| | | | A | Require replacement of nut. |
| Lug nut flats rounded | | | | |
| | | | A | Require replacement of nut. See note (2) |
| Lug nut seized | | | | |
| | | | A | Require replacement of nut and/or stud. |
| | | | | See note (2) below. |
| Stud incorrect | | | | |
| | | | A | Require replacement of stud. |
| Threads damaged | | | | |
| | | | A | Require repair or replacement of |
| | | | | component with damaged threads. |
| Threads stripped (threads missing) | | | | |
| | | | A | Require replacement of component with |
| | | | | stripped threads. |

NOTE: (1) Some manufacturers require replacement of all studs on that wheel if two or more studs or nuts on the same wheel are broken or missing.

(2) Only required if removing wheel.

WHEEL BEARINGS, RACES, & SEALS

NOTE: When repacking or replacing wheel bearings, grease seal replacement is required. You are not required to replace these

\* BRAKE SYSTEM UNIFORM INSPECTION GUIDELINES \*

Monday, August 23, 1999 11:22PM

components in axle sets. Determine the need to replace based upon the individual component conditions that follow.

WHEEL BEARINGS, RACES, AND SEALS

| Condition | | | Code | Procedure |
|--|--|--|------|---|
| Rear axle seal on rear-wheel drive leaking | | | | |
| | | | A | Require replacement of seal and inspection of axle, bearing, housing, and vent tube. |
| Seal leaking | | | | |
| | | | A | Require replacement of seal and inspection of bearings. |
| Spindle worn | | | | |
| | | | A | Require replacement of spindle and bearings. |
| Wheel bearing assembly feels rough when rotated | | | | |
| | | | A | Require replacement of bearing assembly. |
| Wheel bearing balls are pitted | | | | |
| | | | A | Require replacement of bearing assembly. |
| Wheel bearing balls are worn | | | | |
| | | | A | Require replacement of bearing assembly. |
| Wheel bearing end-play exceeds manufacturer's specifications | | | | |
| | | | A | Require adjustment of bearing, if possible. If proper adjustment cannot be obtained, require repair or replacement of worn component. |
| Wheel bearing race is loose in the hub bore | | | | |
| | | | A | Require replacement of hub assembly and wheel bearings. |
| Wheel bearing races are pitted | | | | |
| | | | A | Require replacement of bearing assembly. |
| Wheel bearing races are worn | | | | |
| | | | A | Require replacement of bearing assembly. |
| Wheel bearing rollers are pitted | | | | |
| | | | A | Require replacement of bearing assembly. |
| Wheel bearing rollers are worn | | | | |
| | | | A | Require replacement of bearing assembly. |

WHEEL CYLINDERS

You are not required to replace or rebuild wheel cylinders in axle sets. However, when rebuilding or replacing a wheel cylinder due to the conditions that follow, you may suggest rebuilding or

\* BRAKE SYSTEM UNIFORM INSPECTION GUIDELINES \*

Article Text (p. 30)

1989 Volkswagen Golf

Monday, August 23, 1999 11:22PM

replacement of the other wheel cylinder (on the same axle) for preventive maintenance, for example, the part is close to the end of its useful life.

Determine the need to rebuild or replace based upon the individual wheel cylinder conditions that follow.

WHEEL CYLINDERS

| Condition | | | Code | Procedure |
|--|--|--|------|---|
| Attaching hardware bent | | | A | Require replacement of bent parts. |
| Attaching hardware broken | | | A | Require replacement of broken parts. |
| Attaching hardware corroded affecting structural integrity | | | A | Require replacement of corroded parts. |
| Attaching hardware loose | | | A | Require repair or replacement. |
| Attaching hardware missing | | | A | Require replacement of missing parts. |
| Bleeder port damaged (if non-repairable) | | | A | Require replacement. |
| Bleeder screw plugged | | | A | Require repair or replacement of bleeder screw. See note (1) below. |
| Bleeder screw broken off in wheel cylinder (if non-repairable) | | | A | Require replacement. See note (1) below. |
| Bleeder screw seized | | | A | Require replacement. See note (2) below. |
| Bore corroded (pitted) | | | A | Require replacement. |
| Bore grooved | | | A | Require replacement. |
| Bore oversized | | | A | Require replacement. |
| Casting mounting threads damaged | | | A | Require repair or replacement. |
| Casting mounting threads stripped (threads missing) | | | A | Require replacement. |
| Dust boot damaged | | | A | Require replacement of dust boot. See note (3) below. |
